Training Catalog

Tanium Success

Whether you're just getting started or ready to expand your skills and knowledge of Tanium, our comprehensive training will show you how to fulfill your goals at speed and scale.

Participants gain an increased proficiency in Tanium's technology and will be equipped with the core knowledge to be successful.

Tanium Training

Tanium training provides enhanced knowledge and understanding of Tanium products, and gives users the confidence they need to expand their abilities and get the most out of their Tanium deployment.

3 Ways to Learn

On-Demand
(Self-Paced)

Instructor-Led
(Onsite)

Instructor-Led
(Virtual Classroom)

Training courses are offered either onsite at your location or remotely through virtual classrooms. Both options provide valuable knowledge through live instruction and reinforce what is taught with hands-on labs in a Tanium-provided environment. Self-paced training is also available.

Certified Trainers

Training classes are conducted by certified Tanium instructors utilizing standardized curriculum alongside their in-depth, real-world expertise and knowledge of customer needs and priorities.

Attendees capitalize on the expertise Tanium's Technical Account Managers (TAMs) provide in training classes to cultivate the knowledge, skills, and proficiency needed in their jobs. Due to their close working relationship with customers, TAMs are unsurpassed in their capability to convey the key aspects of Tanium, and ensure attendees are provided the best possible training experience.

Audience

Tanium role-based training is geared toward the following users in your organization:

All Tanium Users
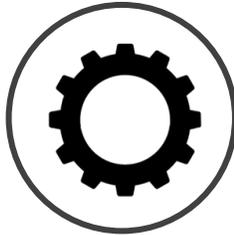

Operations Users

Security Users

Tanium Administrators

Tanium Courses

Tanium Core Online Training   Pre-requisite

Tanium Core online training course introduces the Tanium platform and core functions including questions, sensors, packages, saved questions, dashboards, categories, analyzing trends, actions, action groups, and more. Participants demonstrate their knowledge with a review assessment covering each topic.

*This course is a recommended pre-requisite for those attending instructor-led training from Tanium.

Audience: ALL Tanium Users

Length: 90 minutes

Delivery: On-Demand (self-paced)

Topics Include:

- Tanium platform overview
- Topology
- Questions
- Sensors
- Packages
- Saved questions
- Dashboards and Categories
- Analyzing trends
- Actions and action groups

Tanium Operations and Security Essentials

The purpose of Operations and Security Essentials is to immerse students in the Tanium environment. By the end of this class, all successful graduates will be able to effectively navigate the Tanium core platform and its associated modules; understand how best to leverage Tanium to effect change in their environment; and learn the primary use cases of each Tanium module.

Audience: ALL Tanium Users

Length: 4 Days

Delivery: Instructor-led

      (Onsite or Virtual Classroom)

Topics Include:

- Access and navigate the Tanium environment
- Effectively ask questions to gather information about the network environment
- Effectively identify circumstances in the environment where Tanium can leverage positive change
- Demonstrate primary use cases for each Tanium module

Tanium Operations Suite

The Tanium Operations Suite training course teaches how to utilize the power and speed of Tanium in your environment to take control of unmanaged and rogue devices, get reliable up-to-date asset and inventory data, distribute, manage and report on Operating system patches, deploy software in seconds at the enterprise level, gain visibility into applications, and more.

Audience: Ops/Security

Length: 3 Days

Delivery: Instructor-led

      (Onsite or Virtual Classroom)

Topics Include:

- Discover and respond to unmanaged asset
- Asset and inventory with Tanium
- Operating System patch management
- Deploy and manage software with your enterprise environment

Tanium Advanced Threat Response

Tanium's Advanced Threat Response training is designed for security incident response practitioners investigating breaches involving lateral movement, fileless attacks using "living off the land" methods, injected code, and data exfiltration. Students will benefit from hands-on experience with Tanium Threat Response including Sensors, host-level forensic timelines, analysis of acquired files, memory analysis techniques for finding common injection tradecraft, use of intelligence such as Tanium Signals, and Indicators of Compromise.

Audience: Security Users

Length: 1 Day

Delivery: Instructor-led

        (Onsite or Virtual Classroom)

Topics Include:

- Overview of Threat Response capabilities
- Threat Response Components and Sources of Evidence
- Sort, filter, and review Threat Response alerts
- Host investigations and remediation
- Develop and apply threat intel with signal and IOCs

Tanium Advanced Content

The Tanium Advanced Content course demonstrates how to use your scripting knowledge in advanced ways in the Tanium Environment. Learn how to complete tasks such as controlling the execution of external executables, using sensor returns and strings, and handling rogue sensors.

Audience: Ops/Security/Admins

Length: 1 Day

Delivery: Instructor-led

        (Onsite or Virtual Classroom)

Topics Include:

- Tanium content overview
- Tanium Sensor deep-dive
- Extending Sensors beyond scripts
- Strings
- Packages
- Best practices and content examples

Advanced Tanium Platform Installation and Configuration for Windows

This advanced course builds upon your previous knowledge by covering tasks including installing the Tanium Platform, importing initial content, remote module installation, installing zone servers and zone server hubs. This advanced course is intended for Tanium administrators.

Audience: Tanium Administrators

Length: 1 Day

Delivery: Instructor-led

   (Onsite or Virtual Classroom)

Topics Include:

- Tanium server installation
- Licensing
- Configuring high availability
- Database install & configuration
- Module Servers
- Zone Servers
